

Helcio Felippe Junior

 h.felippe@fisica.ufrn.br  hfelippe.com

Education

M.Sc. in Physics. Federal University of Rio Grande do Norte, Brazil 2019–2021

 **Thesis:** *Pearson matrices as density operators: A test of the entropic brain hypothesis using the von Neumann entropy.*

Advisor: Prof. Gandhimohan M. Viswanathan 

B.Sc. in Physics. Federal University of Santa Catarina, Brazil 2012–2018

Publications

Peer-reviewed

 A. Viol, **H. Felippe, Jr.**, F. Palhano-Fontes, H. Onias, D. B. de Araujo, and G. M. Viswanathan. “Statistical physics applied to the neuroscience of altered states: the brain under the influence of psychedelics”. *Rev. Bras. Ens. Fís.* **43** (2021). doi: [10.1590/1806-9126-RBEF-2020-0440](https://doi.org/10.1590/1806-9126-RBEF-2020-0440).

Preprint

 **H. Felippe**, A. Viol, D. B. de Araujo, M. G. E. da Luz, F. Palhano-Fontes, H. Onias, E. P. Raposo, and G. M. Viswanathan. “The von Neumann entropy for the Pearson correlation matrix: A test of the entropic brain hypothesis”. [arXiv:2106.05379](https://arxiv.org/abs/2106.05379).

Book chapter

 J. R. B. Arenhart and **H. Felippe, Jr.** “The Fate of Bundle and Substratum Theories Under KS Theorem” in *A True Polymath: A Tribute to Francisco Antonio Doria*, J. A. de Barros and D. Krause, Eds. ([College Publications](https://www.collegepublications.co.uk/true-polymath), 2020), pp. 1–22. ISBN: 978-1-84890-351-7.

Research experience

Graduate Research Assistant 2019–2021

Statistical physics applied to neuroscience: Development of a threshold-free calculation of the entropy of correlation matrices. Complex networks and fMRI time series analyzes. Published a paper as second-author, a preprint as first-author, and defended a Master’s thesis under the supervision of Prof. Gandhimohan M. Viswanathan 

Collaborator 2018–2020

Logical foundations of quantum theory: Research on quasi-set theory as a logical system for indistinguishable particles. Co-authored a book chapter with Prof. Jonas R. B. Arenhart 

Undergraduate Research Assistant 2013–2014

Electromagnetic transport properties of nanostructures: Production of porous thin films of alumina via anodization processes. Project supervised by Prof. Alexandre D. C. Viegas 

Presentations

Talks

- **III Brazilian Meeting on Statistical Physics** Nov. 2021
The von Neumann entropy for the Pearson correlation matrix
- **XLVIII Paulo Leal Ferreira Congress of Physics** Oct. 2020
Complex network approach to the neuroscience of psychedelics
- **VI Workshop on Quantum Mechanics** Dec. 2019
Bringing non-individuality and non-contextuality back together

Poster

- **5th House Symposium of the Brain Institute** Dec. 2019
Complex network approach to the neuroscience of psychedelics

Fellowships and awards

- High Impact Scholarship Award (University of Exeter-UK)** Jul. 2021
Scholarship to cover Week 2 of the Exeter School on Urban Analytics:
Complex networks and machine learning with Python.
- Neuromatch Academy** Jul. 2021
Acceptance and completion of the NMA course on computational neuroscience:
dynamical systems, reinforcement learning, and network causality.
- Data Visualization Bootcamp (DeMoS Institute)** Jun. 2021
Grant for developing data visualization solutions for the non-profits
[fair-fish international](#) and [FishEthoGroup](#).
- Graduate scholarship (CAPES-Brazil)** 2019–2021
Master's scholarship for research in statistical physics and complex systems.
- Undergraduate scholarship (CNPq-Brazil)** 2013–2014
Bachelor's scholarship for research in experimental condensed matter physics.

Teaching and outreach

- Teaching Assistant** Fall 2020
Classical mechanics to engineering majors. (Remote teaching due to COVID-19.)
- Mini-course instructor** Dec. 2019
Linear algebra and quantum mechanics to physics and philosophy majors.
- Individualized Instruction** Spring 2018
Calculus and classical physics to a visually impaired physics major.
